/note="Grgan: Stomach; Vector: pCNS; Site l: EcoRI;
Site 2: NotI; The poly (A)+ RNA was dephosphorylated with bacterial alkaline phosphatase (BAP) and then decapped with tabacco acid pyrophosphatase (TAP). The decapped intact mRNA was ligated with DNA-RNA linker including EcoR I site by treatment of T4 RNA ligase and the first strand cDNA was synthesized from oligo dT-selected mRNA by priming with dT-tailed vector. The dT-tailed vector was adjusted to have about 6 ont. The CDNA vector was circularized with E. coli DNA ligase after digestion of EcoRI which site is also included in vector. An RNA strand converted to a DNA strand by Okayama-Berg method. The obtained cDNA vectors were used for transformation of competent cells B. coli Top10F' by electroporation method. The CDNA libraries constructed by this method are

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

use in

The present invention describes an isolated Rh(D) binding protein, one ferably a human antibody, (I) having an amino acid sequence comprising one of the sequences (S) given in AAG93558 to AAG93669. (I) has immunostimulant activity, and can be used as an immune system stimulant. (I) can be used in diagnostic and therapeutic medicine. The antibodies are used in diagnostics that require human antibodies intagnostics that require human antibodies autibodies, such as determine the Rh phenotype of human red blood cells. AAH68615 to AAH68726 represent the nucleotide sequence which encode

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        જે
                                                                                       The present invention describes an isolated Rh(D) binding protein, preferably a human antibody. (I) having an amino acid sequence comprising one of the sequences (S) given in AAG93558 to AAG93669. (I) has immunostimmlant activity, and can be used as an immune system stimulant. (I) can be used in diagnostic and therapeutic medicine. The antibodies are used in diagnostic that require human antibodies instead of animal antibodies, such as determine the Rh phenotype of human red blood calls. AAEG8615 to AAH68726 represent the nucleotide sequence which encode thain CDR3 amino acid sequences which are given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                 125
                                                                                                                                                                                                                                                                                                                                                                                       122

The present invention describes an isolated Rh(D) binding protein, preferably a human antibody, (I) having an amino acid sequence comprising one of the sequences (S) given in AAG93586 to AAG93589. (I) has intermedetimulant activity, and can be used as an immune system stimulant. (I) can be used in diagnostic and therapeutic medicine. The antibodies are used in diagnostics that require human antibodies instead of animal antibodies, such as determine the Rh phenotype of human red blood cells. AAH68615 to AAH68726 represent the nucleotide sequence which encode hado3558 to AAG93670 to AAG93697 represent anti-Rh(D) heavy chain CDR3 amino acid sequences which are given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   125
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         242

                                                                                                                                                                                                                              The invention relates to an isolated Rh(D) binding protein. The protein can be used for magnetically activated cell sorting. The protein is useful in various diagnostic and therapeutic applications in humans, including typing of blood or blood products. The present sequence represents DNA encoding a human anti-Rh(D) chain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         183 CAGTGGCAGTGTGGATCTGGGACAGTTTCACTCTCACCATCAGCAGTCTGCAACCTGAAGA

                                                                                                                                                                                                                                                                                                                  62
                                                                              The invention relates to an isolated Rh(D) binding protein. The protein can be used for magnetically activated cell sorting. The protein is useful in various diagnostic and therapeutic applications in humans, including typing of blood or blood products. The present sequence represents DNA encoding a human anti-Rh(D) chain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CAGCGGCAGTGGATCTGGGACAGAGTTCACCCTCACCGCTCACCAGCCTGAAGA

The invention relates to an isolated Rh(D) binding protein. The protein can be used for magnetically activated cell sorting. The protein is useful in various diagnostic and therapeutic applications in humans, including typing of blood or blood products. The present sequence represents DNA encoding a human anti-Rh(D) chain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New human Rh(D)-binding protein useful for various diagnostic and therapeutic applications, including typing of blood or blood products.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              TITIGGACTIVITACIGICIACAGGITIVATAGIACCCCICGGACGITICGGCCAAGGGAC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      62
                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an isolated Rh(D) binding protein. The protein can be used for magnetically activated cell sorting. The protein is useful in various diagnostic and therapeutic applications in humans, including typing of blood or blood products. The present sequence represents DNA encoding a human anti-Rh(D) chain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CAAGCTCACCCAGTCTCCATCCTCCATGTCTGCATCTGTAGGAGACAGAGTCACCATCAC

```

which binds to human epidermal growth factor receptor (ECFR), where the Mab is selected from immunoglobulin (1g)GJ, 1gA, 1gE, 1gM, 1gG4 and 1gD antibodies. The Mab is useful for inhibiting growth of a cell expressing cFRR, for inducing cytolysis of a cell expressing ECFR, or for detecting the presence of EGFR antigen, or a cell expressing ECFR. It is useful for realing or preventing a disease mediated by expression of EGFR, the disease is cancer (such as bladder, breast, colon, kidney, ovarian, prostate, renal, or head and neck cancer), or an autoimmune disease (such as inflammancy arthritis), where the autoimmune disease involves opithelial hyperproliferation. The Mab can be conjugated to a binding specificity for a FC receptor or to a cytocoxin. It is useful as diseases, for inhibiting growth and/or mediating phagocytosis and killing of cells expressing EGFR, for treating autoimmune disease such as psecificity for a cell expressing EGFR, to mediating phagocytosis or cytolysis of a cell expressing EGFR, to resample for labeling colls, to inhibit EGF or TGF-alpha induced autophosphorylation of EGFR, to target cells expressing FGFR in the presence of human effector cells, to inhibit EGF or TGF-alpha induced autophosphorylation of EGFR, to target cells expressing regiment or EGFR, for example for labeling such an orled on the UL chain of an anti-EGFR antibody 2F8 and the EGFR expresents invention relates to an isolated human monoclonal antibody (MAb)

The present invention describes an isolated Rh(D) binding protein, preferably a human antibody, (I) having an anino acid sequence comprising one of the sequences (S) given in AAG93558 to AAG93669. (I) has immunostimulant activity, and can be used as an immune system stimulant. (I) can be used in diagnostic and therapeutic medicine. The antibodies are used in diagnostics that require human antibodies instead of animal antibodies, such as determine the Rh phenotype of human red blood cells. AAG93558 to AAG93679, to AAG93679 represent which encode AAG93679 amino acid sequences which are given in the exemplification of

The prot can be used for magnetically activated cell sorting. The protein is useful in various diagnostic and therapeutic applications in humans, including typing of blood or blood products. The present sequence represents DNA encoding a human anti-Rh(D) chain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; ds, gene, RH(D) binding protein; blood typing, blood product,
magnetically activated cell sorting.

antibodies are active against the Rhesus D antigen. They can be used for treating disorders which would benefit from anti-Rhesus D immunoglobulin, e.g. idiopathic thrombocytopenic purpura. They can also be used for the protection of Rhesus negative women before or immediately after the bitth of a Rhesus positive child to prevent haemolytic disease of the newborn (fMDN) in subsequent pregnancies. In addition, anti-Rhesus D immunoglobulin can be used after mistransfusions of Rhesus positive blood to Rhesus negative recipients in order to prevent sensitisation to the Rhesus D antigen. The products can also be used as diagnostic reagents

cell;

```
The invention relates to human monoclonal antibodies or their antigen

binding portions that specifically bind to dendritic cells and has one or

competed the following characteristics: (a) a binding affinity constant to

a dendritic cell of at least about 10 to the power 7 M-1; (b) the ability constant to

compense a dendritic cell; (c) the ability to internalise after

to opsonise a dendritic cell; (c) the ability to internalise after

colls. The isolated human monoclonal antibody or its antigen binding

colls. The isolated human monoclonal antibody or its antigen binding

colls. The allowing colls; in the presence of human effector cells; or

cytolysis of dendritic cells. The antibodies or its antigen

complete in thibitic cells in the presence of human manose receptor on

binding portion, binds to and blocks the human manose receptor on

complete in thibitic cells. The antibodies or its antigen

complete in the antibodies have immunomodulatory, antiinflammatory,

antirheumatic, antiarthitic, neuroprotective, antidabetic, antianaemic,

antirheumatic, antiarthiting growth of a dendritic cell, inducing cytolysis of

dendritic cell, treating or preventing a dendritic cell, inducing cytolysis of

dendritic cell and preventing binding of a pathogen (a virus or a

confercing the presence of a dendritic cell, inducing cytolysis of

dendritic cell and preventing binding of a pathogen (a virus or a

confercing in mannose receptor on dendritic cells. In particular,

the antibodies may be used to treat, autoimmune disease, graft versus

confercing anaemia, Addison's disease, lupus erythematosus, Reiter's

conforme and Graves disease. The present sequence is that of the human

conforme and Graves disease. The present sequence is that of the human

conformed antibody Bll variable light chain, useful to the invention

The present invention describes an isolated Rh(D) binding protein, preferably a human antibody, (I) having an amino acid sequence comprising one of the sequences (S) given in AAG93558 to AAG93669. (I) has immunostimulant activity, and can be used as an immune system stimulant. (I) can be used in diagnostic and therapeutic medicine. The antibodies are used in diagnostics that require human antibodies instead of animal antibodies, such as determine the Rh phenotype of human red blood cells. AAH68615 to AAH68726 represent the nucleotide sequence which encode AAG93569. AAG93690 to AAG93697 represent anti-Rh(D) heavy chain CDB3 manno acid sequences which are given in the exemplification of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes an isolated Rh(D) binding protein, preferably a human antibody. (I) having an amino acid sequence comprising one of the sequence comprising immunostimmlant activity, and can be used as an immune system stimulant. (I) can be used in diagnostic and therapeutic medicine. The antibodies are used in diagnostics and therapeutic medicine. The antibodies are used in diagnostics that require human antibodies instead of animal antibodies, such as determine the Rh phenotype of human red blood cells. AAKi66615 to AAK69726 represent the nucleotide sequence which encode AAK931670 to AAA93497 represent anti-Rh(D) heavy chain CDR3 amino acid sequences which are given in the exemplification of

Patent NO. 6255455

GENERAL INFORMATION:
APPLICANT: Siegel, Donald L.
APPLICANT: Siegel, Donald L.
TITLE OF INVENTION: Rh(D)-BINDING PROTEINS AND MAGNETICALLY ACTIVATED CELL
TITLE OF INVENTION: SORTING METHOD FOR PRODUCTION THEREOF
FILE REPERENCE: 09596-4210.
CURRENT APPLICATION NUMBER: US/09/240,274
CURRENT FILING DATE: 1999-01-29
BARLIER PILING DATE: 1999-01-29
BARLIER PILING DATE: 1998-04-10
BARLIER APPLICATION NUMBER: 60/028,550
BARLIER FILING DATE: 1996-10-11
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      TIGCAGGGCAAGICAGGACATTAGGIAITATITAAATTGGTATCAGCAGAAACCAGGAAA 125

```
| Sequence 211, Application US/09240274
| Sequence 211, Application US/09240274
| Patent No. 6255455
| SEMERAL INFORMATION:
| APPLICANT: Siegel, Donald L.
| TITLE OF INVENTION: Rh(D)-BINDING PROTEINS AND MAGNETICALLY ACTIVATED CELL
| TITLE OF INVENTION: SORTING METHOD FOR PRODUCTION THEREOF
| FILE REFERENCE: 09596-4207
| CURRENT APPLICATION NUMBER: US/09/240,274
| CURRENT FILING DATE: 1999-01-19
| EARLIER APPLICATION NUMBER: 60/081,380
| EARLIER PILING DATE: 1999-01-0
| EARLIER PILING DATE: 1996-10-11
| NUMBER OF SEQ ID NOS: 224
| SOFTWARE: PatentIN Ver. 2.0
| SEQ ID NO 211
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                126 AGCTCCTAAGCTCCTGATCTATGTATCCAGTTTGCAAAGTGGGAGTCCCATCAAGGTT 185

Sequence 104, Application US/09848798

Publication No. US20030040605A1

GENERAL INFORMATION:

APPLICANT: Siegel 1.

TITLE OF INVENTION: Rh(D)-BINDING PROTEINS AND MAGNETICALLY ACTIVATED CELL

TITLE OF INVENTION: SORTING METHOD FOR PRODUCTION THEREOF

TITLE OF INVENTION: SORTING METHOD FOR PRODUCTION THEREOF

TILE OF INVENTION: SORTING METHOD FOR PRODUCTION THEREOF

TILE OF INVENTION: SORTING METHOD FOR PRODUCTION THEREOF

TILE OF INVENTION NUMBER: US/09/848,798

PRIOR APPLICATION NUMBER: BARLIER APPLICATION NUMBER: 09/240,274

PRIOR PILING DATE: BARLIER FILING DATE: 1999-01-29

PRIOR FILING DATE: RARLIER FILING DATE: 1996-10-11

NUMBER OF SEQ ID NCS: 224
